

Python Mini Project Codes

TASK 1: Hangman Game

```
import random

words = ["python", "apple", "computer", "science", "hangman"]

word = random.choice(words)
guessed = []
attempts = 6

print("===== HANGMAN GAME =====")

while attempts > 0:

    display = ""

    for letter in word:
        if letter in guessed:
            display += letter + " "
        else:
            display += "_ "

    print("\nWord:", display)

    if "_" not in display:
        print("You Won!")
        break

    guess = input("Enter a letter: ").lower()

    if guess in word:
        guessed.append(guess)
        print("Correct Guess!")
    else:
        attempts -= 1
        print("Wrong Guess!")
        print("Attempts Left:", attempts)

if attempts == 0:
    print("\nGame Over!")
    print("The word was:", word)
```

TASK 2: Stock Portfolio Tracker

```
stocks = {
    "AAPL": 180,
    "TSLA": 250,
    "GOOGLE": 150,
    "AMZN": 200
}

print("===== STOCK PORTFOLIO TRACKER =====")

total = 0

for stock, price in stocks.items():

    quantity = int(input(f"Enter quantity of {stock}: "))

    investment = quantity * price

    total += investment

    print(f"{stock} Investment = {investment}")

print("\n===== PORTFOLIO SUMMARY =====")
```

```
print("Total Investment =", total)

file = open("portfolio.txt", "w")
file.write("Total Investment = " + str(total))
file.close()

print("Portfolio saved in portfolio.txt")
```

TASK 3: Task Automation with Python Scripts

```
import os
import shutil

source_folder = "source"
destination_folder = "destination"

files = os.listdir(source_folder)

for file in files:
    if file.endswith(".jpg"):
        source_path = os.path.join(source_folder, file)
        destination_path = os.path.join(destination_folder, file)
        shutil.move(source_path, destination_path)
        print(file, "moved successfully!")

print("\nAll JPG files moved.")
```
